

Joint Statement by the European Commission, the Ministry of Energy of Ukraine, and the Energy Community Secretariat

The European Commission, the Ministry of Energy of Ukraine, and the Energy Community Secretariat hereby call on current and prospective donors to contribute EUR 650 million to the Ukraine Energy Support Fund, significantly ahead of the approaching winter.

The G7 Leaders in their Statement on geopolitical issues of 17 June 2026 stressed the importance of Ukraine's energy resilience, on the basis of the needs and priorities expressed by Ukrainian authorities and agreed to provide further support to get the country through next winter.

Over the past four years, G7+ countries have channelled EUR 1.95 billion through the Ukraine Energy Support Fund, managed by the Energy Community Secretariat, making a substantial contribution to Ukraine's energy resilience. All resources available under the Fund have been fully allocated in line with the support priorities endorsed by the Ministry of Energy of Ukraine.

Preparation for the 2026/2027 winter season requires coordinated action. The G7+ Energy Rammstein Group is invited to consider priority needs identified by Ukraine amounting to EUR 650 million. Swift mobilisation of additional funding will ensure the timely procurement and delivery of critical equipment and services before the upcoming winter.

The Fund has also further enhanced its operational capacity: needs are prioritised to maximise impact, strategic emergency reserves are built up, procurement and contracting timelines are shortened, and, where possible, private investments are facilitated through de-risking instruments.
